DragonSpeechTips

220⁺ Custom Dragon Commands for MindManager version 2020

Details

Dragon by default does not provide you with voice commands to carry out most of the Mindjet MindManager functions and as such you will find that you are limited to the built-in menu and key press Dragon commands.

The following Dragon commands have been created by DragonSpeechTips (DST) to provide a wealth of additional voice commands that can be dictated when using Mindjet MindManager version 2020.

search for an image of a (x) search for an image of an (x) search for image (x) search for an image of (x) search for a image of (x) search images for (x)	Works when the Add Image window is active. It will search the MindManager library of images for the dictated image. For example, say "search for an image of a building". Use Dragon generic commands to navigate the available images (press down arrow / press up arrow).
select image select this image	Works when the Add Image window is active. It will select the highlighted image and close the Add Image window.
read this back to me read this topic read this topic back to me read this topic out loud	Reads out load the selected Topic or Callout.

Note:

Dragon generic, menu, keyboard and mouse commands are available for use in MindManager and at times should be used with these custom commands.

For example, the custom command "create relationship" can be used with the "Mouse Grid" command to place the relationship on the intended Topic. To complete the formation of the relationship, use the generic mouse command "Mouse Click".

When performing dictation, the "Dictation Box" will appear and the use of commands such as "Click Transfer" and "Click Cancel" work in the normal way.
